

SECURITY TRANSPORT & STORAGE

security chain anchored to a secure point in the vehicle

locking device

inside the rifle case the locking device passes through the trigger

a locking device must pass through the trigger mechanism and be secured to the vehicle

Aim

The aim is to ensure that Section 1 firearms and ammunition and Section 2 shotguns are stored and transported securely to prevent, so far as is reasonably practicable, unauthorised people taking or using them.

Security

Security of your firearms and ammunition is your responsibility.

- 1 Ensure that you are in possession of a valid Firearms Certificate which covers all firearms and ammunition in your possession.
- 1 Ensure firearms and ammunition are stored in accordance with the conditions of your Firearm Certificate.*
- 1 Only allow individuals authorised to possess your firearm to have access to it.
- 2 Ensure that your Firearms Certificate is secure when not in use. Ensure you can produce your Firearms Certificate if requested by the Police, when carrying your firearms.

Methods of securing firearms

The law does not prescribe how 'firearms' (Section 1 Firearms and Section 2 Shotguns) and ammunition must be kept securely. When considering applications for firearms or shotgun certificates, the police will look at the circumstances of each case and at overall security arrangements, including the security of the premises where the firearms and

ammunition are kept. Detailed guidance is available from the Home Office.¹

- 2 Any cabinets used for storing firearms, component parts or ammunition should conform to British standard BS 7558.
- 2 In certain cases, where only one firearm is held, a gun clamp may be used alongside a lockable metal container for bolt and ammunition.
- 2 Keep the keys in a safe location known only to the FAC holder.
- 2 When in shared storage, secure individual firearms by removal and retention of the bolt and lock with a trigger lock or other security device to prevent unauthorised access to your firearm by others.
- 2 When staying in a hotel or guesthouse, firearms may be stored in a safe or in a cabinet on the premises to which only you have access. If this is not available, then use a security chain anchored to a secure point.
- 3 Ensure rifle bolts and magazines are secured separately.

Ammunition

- 1 Ensure that Section 1 ammunition is stored and transported securely to prevent unauthorised access.
- 2 It should be stored within a separate secure compartment within a gun cabinet or kept separately in a locked container (such as the glove compartment of a vehicle).

Storage conditions

- 3 Due to their unlined steel construction, gun cabinets are not the best environment for rust protection of firearms. To protect firearms from rust, install the cabinet in a warm area of the property and add silica damp absorption bags.
- 3 Ensure that rifles are dry, clean and lightly oiled prior to being put in a cabinet.*
- 3 For long-term storage of firearms, make sure that they are clean, and then oil the bores and metalwork.
- 3 Sound moderators and muzzle brake should be removed before storage. This is to maintain condition of the moderator, prevent adhesion to the barrel treading and to prevent rusting damage to the crown and barrel.
- 2 Make sure that all oil in the bore is removed prior to use.
- 3 Store firearms in a cabinet barrel downwards, as this stops oil in the bore and mechanism from draining into the head of the stock, thereby potentially rotting the wood.
- 3 Check stored firearms occasionally, to ensure that they are not rusting.

Transport

Remember that the onus is on the owner of the firearm to know the law. For further information contact your local Police Firearms Licensing Department.

Firearms Law – Guidance to the Police 2002 is a useful Home Office publication.¹

- 2 After being transported, check accuracy before shooting at a live target.
- 2 Use robust containers that provide security and protection.

Consider insuring your firearms against loss or damage.

Vehicle

- 2 Ensure that firearms are in a suitable container, preferably secured to the vehicle. The Home Office recommend fitting an immobiliser.
- 2 Beware of the damage caused by the movement of the vehicle.
- 2 When stopping to refuel etc, make sure the vehicle is locked, firearms are secured to the vehicle out of sight, and take the bolt and FAC with you.

Visitor's permits

- 1 If you intend to take firearms to another EU Country, ensure you have a European Firearms Pass, available from your Firearms Licensing Office. Visitors to Great Britain require a Visitor's Firearm Permit.

Air, sea, rail

Airlines may require much longer to check-in with a firearm, if they accept them at all.

- 2 Check with the airline at the time of booking the requirements for Firearms and Ammunition transportation, including relevant paperwork and insurance.
